Abstract

Your individual report should give a clear description of your personal contribution to your project. The abstract should first consist of one sentence recalling the main functionality of your system, followed by one or two sentences stating your major contribution to the project. A few sentences conclude the abstract with a brief description of the main lessons learned during the project. Overall the abstract should not be longer than 200 words.

electronically by using the submit command:

```
submit sdp Indiv [filename]
```

where [filename] is the name of your individual report file. The filename must be [g]-[s]-report.pdf where [g] is your group number and [s] is your student number.

The document should also be emailed to the group mentor and to the TA at the time of submission.

References

Introduction

This document provides a template for the SDP individual report. This template structures the report into sections, which you are required to use. You can change the subsection headings if you wish. In this template the text in each section will include an outline of what you should include in each section, along with some practical LaTeX examples (for example figures, tables, algorithms). Your document length should be between **two and 3 pages**.

You should delete this introduction section (no introduction is required).

1. Contribution

This section should provide clear description of one key contribution that you were directly responsible for (e.g. designing the physical robot, solving a software problem, pulling together several strands of work). This should detail what you did and why it was important (1-2 pages). If possible, highlight the concrete outcome of the contribution to your project.

2. Lessons learned

This section should provide a reflection on what skills you acquired in the course, what you learned about yourself, and what you learned about group work and project management. This can include lessons about what not to do - e.g., you could explain something the group did which turned out to be a mistake - the assessment will be based on your ability to recognise and learn from this, rather than penalising you for having made a mistake! (1 page).

Submission

This section is to be deleted.

Each group member should submit their own document
